

The Birds of Glacier Bay

This bird checklist includes the 274 bird species found in Glacier Bay National Park and Preserve through September, 2013. This is the short version of the list; a longer version that includes habitat, maps and natural history information is available at the Park Visitor Center.

Glacier Bay National Park is a 5,220 square mile wilderness, comparable in size to the state of Connecticut. It contains both inshore and offshore marine waters, mountain ranges to 15,000 feet, ice fields and glaciers, rivers and lakes, alpine meadows, mature coniferous forests, cottonwood/alder/willow thickets, and glacial barrens. The park ecosystem is rapidly changing after the Little Ice Age that covered much of it with ice two hundred years ago. As glaciers flux and vegetation evolves, bird composition also changes and those changes are expected to continue.

Most of the park is roadless and remote, and even the most popular areas, such as Glacier Bay and the Gustavus Foreland (included in the checklist) are lightly visited. The park boundary extends three miles into the Pacific Ocean and about one mile into Icy Strait and Cross Sound. Bird records for those areas are included. Bird observations are important. Please leave any bird records from your visit at the park headquarters office, or enter them into eBird (www.ebird.org).

Common names and taxonomic order in this checklist follow those established by the American Ornithologist’s Union through 2012.

Key to Bird Status

- C – Common.** Can expect to observe on 90%+ of field days *in appropriate habitat*.
- F – Fairly Common.** Can observe on 50–89% of field days.
- U – Uncommon.** Can expect to observe on less than half of field days.
- R – Rare.** 1–5 records are expected each year.
- V – Very Rare.** More than 2 records exist, but many years may go by without observations.
- + – Accidental.** No more than 2 documented records exist for the species.
- * – Nesting.** Record(s) exist or nesting is suspected.
- (I) – Irruptive.** Populations fluctuate substantially from year to year.

Seasons

- Spring (Sp)** – March through May.
- Summer (Su)** – June through July.
- Fall (F)** – August through November.
- Winter (W)** – December through February.

Acknowledgments

This edition of the Birds of Glacier Bay Checklist was revised and updated by Bruce Paige and Nat Drumheller. We acknowledge the contributions of earlier editions upon which this checklist is based by Dennis Wik 1967, Wik and Greg Streveler 1968, and Bruce Paige 1973, 1979 and 1998. The format used is that of the Birds of Southeast Alaska checklist by Steve Heinl, Bob Armstrong and Rich Gordon. The authors would also like to thank Steve Heinl, Paul Suchanik and Gus van Vliet for their excellent suggestions after reviewing the manuscript.
